

NAME:

ZAIN-UL-ABEDIN

PROJECT TITLE:

PERSONAL PORTFOLIO

INTERNSHIP:

WEBDEVELOPEMENT

DURATION:

2 DAYS

TIME SUBMISSION:

29-JUNE-2025

INTRODUCTION:

What is a Portfolio?

A **portfolio** is a personal collection or website that **showcases your skills, work, projects, and experience** — especially used in creative and technical fields like:

- **Web Development**
- **Graphic Design**
- **Writing**
- **Photography**
- **Engineering**
- **Art** and more.

PURPOSE OF POTRFOLIO

It is to show case my current skills and to fullfill the tasks the target was our instucture

Tolls used

The tools used where

Html

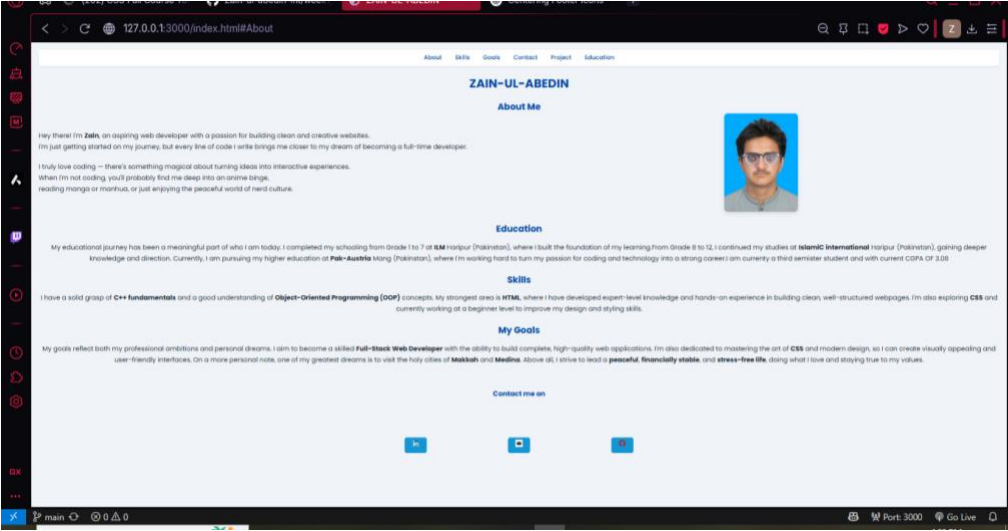

CSS

FEATURES IMPLEMENTED WERE

PROJECTS

My projects are

Quill Clone

I'm currently working on a personal project — a clone of the popular writing app Quill. So far, I've completed the **HTML** and **CSS** structure, designing a clean and minimal interface that focuses on user-friendly writing. The next stage will be building the **functional editor** using **JavaScript** to support rich text formatting and more. This project is helping me strengthen my front-end skills and build confidence in crafting interactive user experiences.

BUILDING OF THE SITE

The html section was no problem for me it divided the page into three sections: header and nav, Main, and footer. The nav was used to create the I made the separate navigation bar. The main was further divided into three sections. The footer was where my contact links were. I used Ideas to link it to the nav bar. Used the anchor tag to anchor them. Used png, svg images to add ul to create the nav and the footer section. Several anchor tags were used as well as images.

CSS

This was the tricky part because I don't know much of CSS, how to select color scheme etc. I also didn't know the proper properties to build it. How I wanted the CSS to work is totally research based. Due to time constraints, I could not [properly] design the portfolio how I wanted. The only challenges that I faced were in CSS as well. A little of CSS was learned.

Features to add:

Fully redesign the website, change the color scheming, add interactivity. Add the video of different projects as well.
